Commonalities: I looked statistically for commonalities in this exclusive group of four. I had thought that Libra would be strongly present due to the nature of the award: peace. The Ari/Lib axis was a weaker axis, but with both Presidents Wilson and Carter with Sun

and Ascendant. All four presidents had placements in Cancer. Three each had placements in Leo, Virgo, Scorpio, Capricorn, Aquarius and Pisces. No signs were completely void. The overall average of all positions per sign is 4.5.

In my presidential research I had found good information by looking at the sign axis. Dominant and recessive qualities emerged easily. Because 52 positions (13 x 4) must be divided by 6 axes, the average becomes 8.7 per axis. Two axes are high (14/10), two are low (4/5) and two (9) are average.

14 by axis: Leo/Aq

9 by axis: Vir/Pis

5 by axis: Ari/Lib

10 by axis: Can/Cap

9 by axis: Tau/Sco

4 by axis: Gem/Sag

All four presidents had placements in Tau/Sco and Vir/Pis. Three of four presidents had placements in Leo/Aqu and Can/Cap/

Looking at houses, all four presidents had placements in the 5th house and three each had placements in the 4th, 6th, 9th, 13th, no houses were empty. Because the midheaven and ascendant were two of the 13 points for each chart, the house count would be skewed.

Distinct groupings formed within individual degrees. The strongest was 2 to 8.5° Tau/Sco with all four presidents represented. Next strongest was 18 to 22.5° Vir/Pis with all four presidents represented. Next was 22 to 27 Leo/Aqu with three of four presidents represented, followed by 13.5 to 18.5 Can/Cap.

Degree Groupings:

USA Virgo rising chart: The Nobel Prize connected with this chart due to the charts of the presidents who received the prize in three of four cases. The USA Neptune is 22 Vir 24. The USA Moon is 22 Aqu 38. The USA Sun is 13 Can 01. The exception was President Roosevelt who was extremely strong in the Tau/Sco axis 2 to 8.5°.
